

# Run your car on Water

## See a working Oxy-Hydrogen System

### You are invited...

to a meeting of the minds to discuss using WATER AS FUEL and check out actual working oxy-hydrogen fuel equipment. The meeting is on June 20 all day til 5PM at the

SVP Research Center  
921 Santa Fé Avenue  
La Junta, Colorado

Stan and Victor, owners of Electrolyzer Fuel Cell

<http://www.ewpowercompany.com/>

will be arriving in their oxy-hydrogen boost powered Buick. You will get to see their revolutionary device and learn all

about it. Stan says the device reduces gasoline consumption by 18%. They will have more figures after their drive down from Minnesota.

While here you can explore the original Brown's Gas Generator that is here on the premises and check out the various other electrolyzers we have on site.

There is no fee for this event but we do love donations towards the research projects, library fund, etc.

Sincerely,  
Dale Pond
